

Matthew Nifong

Systems Engineer | IAM Engineer | Security Operations

Greater Atlanta, GA | Matthew@ganifongs.com | www.linkedin.com/in/matthew-nifong | github.com/int0x8000

PROFESSIONAL SUMMARY

Systems and security engineer with hands-on experience in enterprise endpoint management, identity and access management, and security operations across multi-tenant MSP environments. Maintains a 34-node self-hosted homelab with centralized log management, Detection-as-Code CI/CD pipeline, and fleet automation via Ansible. CompTIA A+ certified, actively pursuing SC-300.

TECHNICAL SKILLS

Identity & Access Management: Microsoft Entra ID, Microsoft Intune (multi-tenant), Windows Autopilot, Conditional Access, Active Directory, Authentik SSO (OIDC/SAML), Vaultwarden

XDR & Security Operations: Trend Vision One XDR, Security Event Investigation & Triage, Endpoint Isolation, Incident Response

Security & Log Management: Graylog, Wazuh SIEM, Sigma Rules, Detection-as-Code, GitHub Actions CI/CD, OpenSearch, MITRE ATT&CK

Automation & Scripting: PowerShell, Power Automate, Microsoft Forms, Bash, Ansible, Python

Infrastructure: Proxmox VE, LXC, Docker, Linux (Debian/Ubuntu), Windows Server, Cloudflare Tunnel, WireGuard, VLANs

Platforms & Tools: Microsoft 365, ConnectWise PSA, RMM, Git/GitHub

WORK EXPERIENCE

Systems Technician / Endpoint & Identity Engineer | **Managed Service Provider** | 2024 — Present

- Leading design and implementation of Microsoft Intune multi-tenant MDM platform covering 1,000+ Windows endpoints across hybrid Azure AD and cloud-only client environments
- Serving as on-call primary for security event investigation and endpoint isolation via Trend Vision One XDR — independently triaging detections, investigating suspicious activity, and making isolation decisions across client environments
- Built a Power Automate + Microsoft Forms workflow automating client new hire onboarding — replaced a manual PDF-to-email process, eliminating manual data entry and auto-generating ConnectWise tickets for 30+ monthly requests across all clients
- Architecting Windows Autopilot enrollment, auto-enrollment via Entra ID device groups, and Enrollment Status Page configuration for zero-touch device provisioning
- Designing device compliance policies, Conditional Access, Windows Hello for Business, BitLocker encryption, and Windows Update rings across multiple client tenants
- Administering Active Directory — user provisioning, GPO, OU structure — and writing PowerShell scripts to automate endpoint configuration and reduce per-request handling time

TECHNICAL PROJECTS

Self-Hosted Security & Infrastructure Homelab | github.com/int0x8000 | 2024 — Present

- Deployed centralized log management across 34 LXC containers using Graylog + OpenSearch + MongoDB, with rsyslog forwarding rolled out fleet-wide via Ansible in a single zero-failure playbook run
- Built Detection-as-Code pipeline using Sigma rules converted to OpenSearch Lucene queries via GitHub Actions CI/CD — automated validation and MITRE ATT&CK tag checking on every commit
- Configured Authentik SSO/IdP with OIDC/SAML integration across internal services and Cloudflare Tunnel for zero-trust external access with no open inbound ports
- Deployed Wazuh SIEM with agent-based threat detection and FIM; integrated alert forwarding into Graylog for unified security visibility across the fleet

CERTIFICATIONS

CompTIA A+ | Issued April 2025

SC-300: Microsoft Identity and Access Administrator | In Progress
